1 INTRODUCTION

This document describes the activities that JIRAM performed during the activity period JM0071 (PJ7), with particular attention to the comparison with the expected data and that achieved, keeping track of the configuration of the instrument with commanding file (SASF).

3 ACTIVITY DESCRIPTION

During PJ7 pass, JIRAM could have a partial coverage of both Northern and Southern Poles of Jupiter. Coverage is given in the figures 1 & 2. Image filter L is for auroras and imager filter M is for mapping the atmospheric thermal emission. Midlatitude observations were mostly done in the Northern hemisphere (Fig. 3). Note that in correspondance of each imager's pictures there is a spectral observation. Details about imager/spectrometer coupling and, more in general, about the instrument and its performances can be found in Adriani et al., 2014 and 2016. Finally, observations of the Jupiter's moons Io and Callisto have also been done (not reported in the figures).

4 RADIATIONS ACQUISITION

Radiation sequences were collected in locations of low particle flux in order to update the mapping of good pixel locations to be used in subsequent radiation data processing. Radiation sequences targeting observations of the radiation environment were performed in the middle magnetosphere and while crossing the northern x-ray hot spot in the northern polar region.

5 SCIENTIFIC GOALS

Below is a table that describes for each science block in the commanding file the relative operative mode and the scientific objectives. The files relating to the various science blocks are shown in the file “JIR_STATUS_EDR_2017191T075948_V01.CSV” in the INDEX directory.

JRM (sasf)	Operative Mode	Goals
